

I am respectfully registering my opposition to the BPL proposal currently before the FCC. The interference potential to the HF and low band VHF spectrum is enormous and constitutes a threat to the Amateur Service impacting not only the hobby aspect but the emergency communication and traffic passing functions so critical as backup to our public safety systems. Please deny the power industry petition based on the findings presented in the ARRL filings on the topic. BPL needs to be a good RF neighbor not a source of loud, obnoxious, and pernicious RF noise. BPL is currently a source spectrum pollution of the worst form and should be further restricted rather than expanded.

Thank You,

Randall D. Dunning
